

SOFFITEL HOMEBUSH

Project Brief:

Various roof areas of the hotel needed a trafficable, UV stable, waterproof membrane that would be suitable for light maintenance traffic.

Solution:

The concrete deck was firstly primed with Duromix™ WBE and then the first coat of Duroproof™5001, followed by Duroproof™ 6001 AL , into which an aggregate of sand had been broadcast. Finally top coat with Duroproof™6001 AL.

About the products used:

Duromix™WBE is a 2 part water based epoxy used to prime external surfaces.

Duroproof™ 5001/6001 system is an elastomeric, UV stable, non slip polyurethane deck system.
