

DUROPROOF ATC

Provides Greater UV Protection & Colour Fastness For Membranes

Technical Data Sheet

DESCRIPTION:

Duroproof ATC is single pack, aliphatic polyurethane waterproofing top coat which has been formulated as a complimentary and compatible top coat for UV and Duroproof PUM. Aliphatic technology provides greater UV protection, colour fastness and anti-chalking properties and is designed to extend the life of exposed aromatic polyurethanes. ATC forms a tough, flexible, seamless, highly UV stable, waterproof coating. ATC meets the 'Green Star' environmental criteria.

BENEFITS AND ADVANTAGES

ATC represents the highest standards in aliphatic polyurethane waterproofing technology and provides the following benefits and advantages.

- Provides excellent UV protection.
- Extends the life of the waterproofing membrane system.
- Meets the 'Green Star' environmental criteria.
- Single pack – no mixing.
- Curing (usually within) 24 hours.
- Permanently flexible
- Suitable for immersion in water.
- Good chemical resistance.
- High strength and puncture resistant.
- Provides seamless membrane (no joints or laps)
- Easily repaired and or maintained.
- Easy to apply.

USES:

ATC is primarily formulated as a highly UV stable top coat over and Duroproof PUM to give greater long term UV protection and colour fastness thereby extending the life and performance of the waterproofing membrane.

SUITABLE SURFACES:

ATC have been formulated as top coat over Duroproof PUM.

SPECIFICATION:

The information contained in this product datasheet is typical but does not constitute a full specification as conditions as specific requirements may vary from project to project. The instructions should be considered as a minimum requirements but the applicator or contractor must use their skill, knowledge and experience to carry out additional works as may be necessary to meet the requirements of the project. Specification for specific projects should be sought from the Company in writing.

LIMITATIONS:

Suitable for maintenance foot traffic and not intended as a general trafficable membrane.

PRECAUTIONS IN USE:

Risk is considered low when properly used but precautions on can, label and / or datasheets should be observed. Do not use in confined areas with poor ventilation. Uncured product is flammable.

PRIMING AND SURFACE PREPARATION:

Good preparation is essential. Surfaces must be sound, stable, dry, clean and free of dust, loose, flaking, friable material and substances that may diminish adhesion.

As its main purpose is to be applied over cured DUROPROOF PUM, it can be applied as follow:

Providing the existing membranes are clean, dry and that the Duroproof ATC is being applied within 48 hours of applying the Duroproof membranes – no other preparation is required.

SLIP RESISTANT FINISH

The following slip resistance rating was achieved by broadcasting 250gsm of Durogrit aggregate per square metre of applied Duroproof ATC.

Test	Rating	Test Method
Dry Friction (with Durogrit)	D1	(AS 4586)
Wet Friction (with Durogrit)	P5	(AS 4586)

APPLICATION:

Apply ATC to Duroproof PUM membranes by brush, roller, broom and squeegee usually in one or two coats at the rate of 3m² per litre per coat, so that the minimum dry film thickness is 300 microns.

COVERAGE:

The stated average coverage rate may vary depending upon type, condition, porosity, texture of the surface and application technique.

ATC Top Coat: Generally, 3m² per litre per coat.

COLOURS:

Grey

DRYING AND CURING

Drying and curing of the product is affected by type, dryness and porosity of the surface, temperature, humidity, ventilation, climate conditions and application technique and therefore drying and curing can only be given as a guide. Generally Duroproof ATC is weather resistant within 6 to 8 hours with full cure within 24 hours.

STORAGE:

Keep in cool, dry place away from heat, flame, combustible material and all sources of ignition. Product contains flammable solvents. Class 3 dangerous goods must be declared prior to transportation. Available in 15 Litre pails.

CLEAN UP:

Avoid spills. They are difficult to clean particularly off porous surfaces. Wet spills use a cloth and Duroproof Solvent. Do not clean off carpets as it is better to allow product to cure and then shave the carpet. Equipment should be immediately cleaned with Duroproof Solvent.

TILING, TOPPING OR TOP COATING:

Generally not covered, although membrane may be covered with drainage cloth and pebbles, ensuring not to damage membrane.

SAFETY PRECAUTIONS:

ATC is solvent based. The use of solvent resistant gloves and goggles (against splashes) are recommended. Use in ventilated areas. If spraying, in confined areas the use of self-contained breathing apparatus is recommended. If swallowed do not induce vomiting, give plenty of water to drink. Seek urgent medical advice. If in eyes, flush thoroughly with clean water, holding open lid to ensure any trapped product may be flushed away. If on skin, remove contaminated clothing and wash skin with soap and water. If inhaled, unlikely due to viscosity of the product, remove person to fresh air and apply artificial respiration if required and seek urgent medical attention. Product is flammable when wet. Keep away from all sources of ignition. Ensure adequate ventilation. Vapours may collect in low lying areas. For full safety data refer to the products Material Safety Data Sheet. Observe precautions as per label.
