

# DuroTorch –SUPERSTICK

SBS modified – Self-adhesive – Polyester carrier OR Laminated HDPE Reinforcement

## Technical Data Sheet

### Description:

The Durotorch - Superstick range is composed of self-adhesive bituminous polymeric waterproofing membranes. They consist of a special compound based on distilled bitumen modified with selected polymers and tackifiers and reinforced with a non-woven spun bond polyester reinforcement (SUPERSTICK) or an HDPE carrier film (DUROTORCH - SUPERSTICK).

The self-adhesive SBS modified waterproofing compound assures good flexibility at low temperatures, excellent adhesive on various substrates, beautiful aesthetic finish.

The whole SUPERSTICK range is manufactured under a closely controlled system which conforms to the ISO 9001 requirements and guidelines.

### Product Uses

SUPERSTICK self-adhesive membranes are versatile and easy to install. Because of their good mechanical characteristics and high dimensional stability, they are suitable to be used both in residential and industrial waterproofing. SUPERSTICK self-adhesive membranes are compatible with most materials normally used in roofing structures. Durotorch - Superstick is specifically designed to be used for basement and sub-structures waterproofing.

### Installation

The underside of SUPERSTICK membrane is finished with a release PE film. The upper side of the Durotorch - Superstick is laminated to a transparent PE film. The upper side of Durotorch - Superstick is laminated to a tough HDPE film.

Surfaces must be perfectly dry, clean and sufficiently plain or levelled. Prior to adhering the membrane to the substrate, the latter must be primed with either water-based or solvent-based bituminous primer.

The product is applied by peeling back the release film and unrolling the Superstick membrane with the adhesion face down on the substrate. Press down Superstick working from the centre to the edges to expel all trapped air.

Stop installation in rain, snow, heavy fog or if the air temperature is below +5°C and over +30°C.

### Handing & Storage

When unloading the material avoid any abrupt impact with the ground.

Do not take up the rolls to the roof without using supporting pallets and safety equipment.

Always store the rolls in upright position, and under shelter. In the cold season preferably do not stock the product at site during night-time.

In case of double stacking use a rigid separation board to spread the load.
